NETWORK CONSULTATION, SOLUTIONS & SERVICES

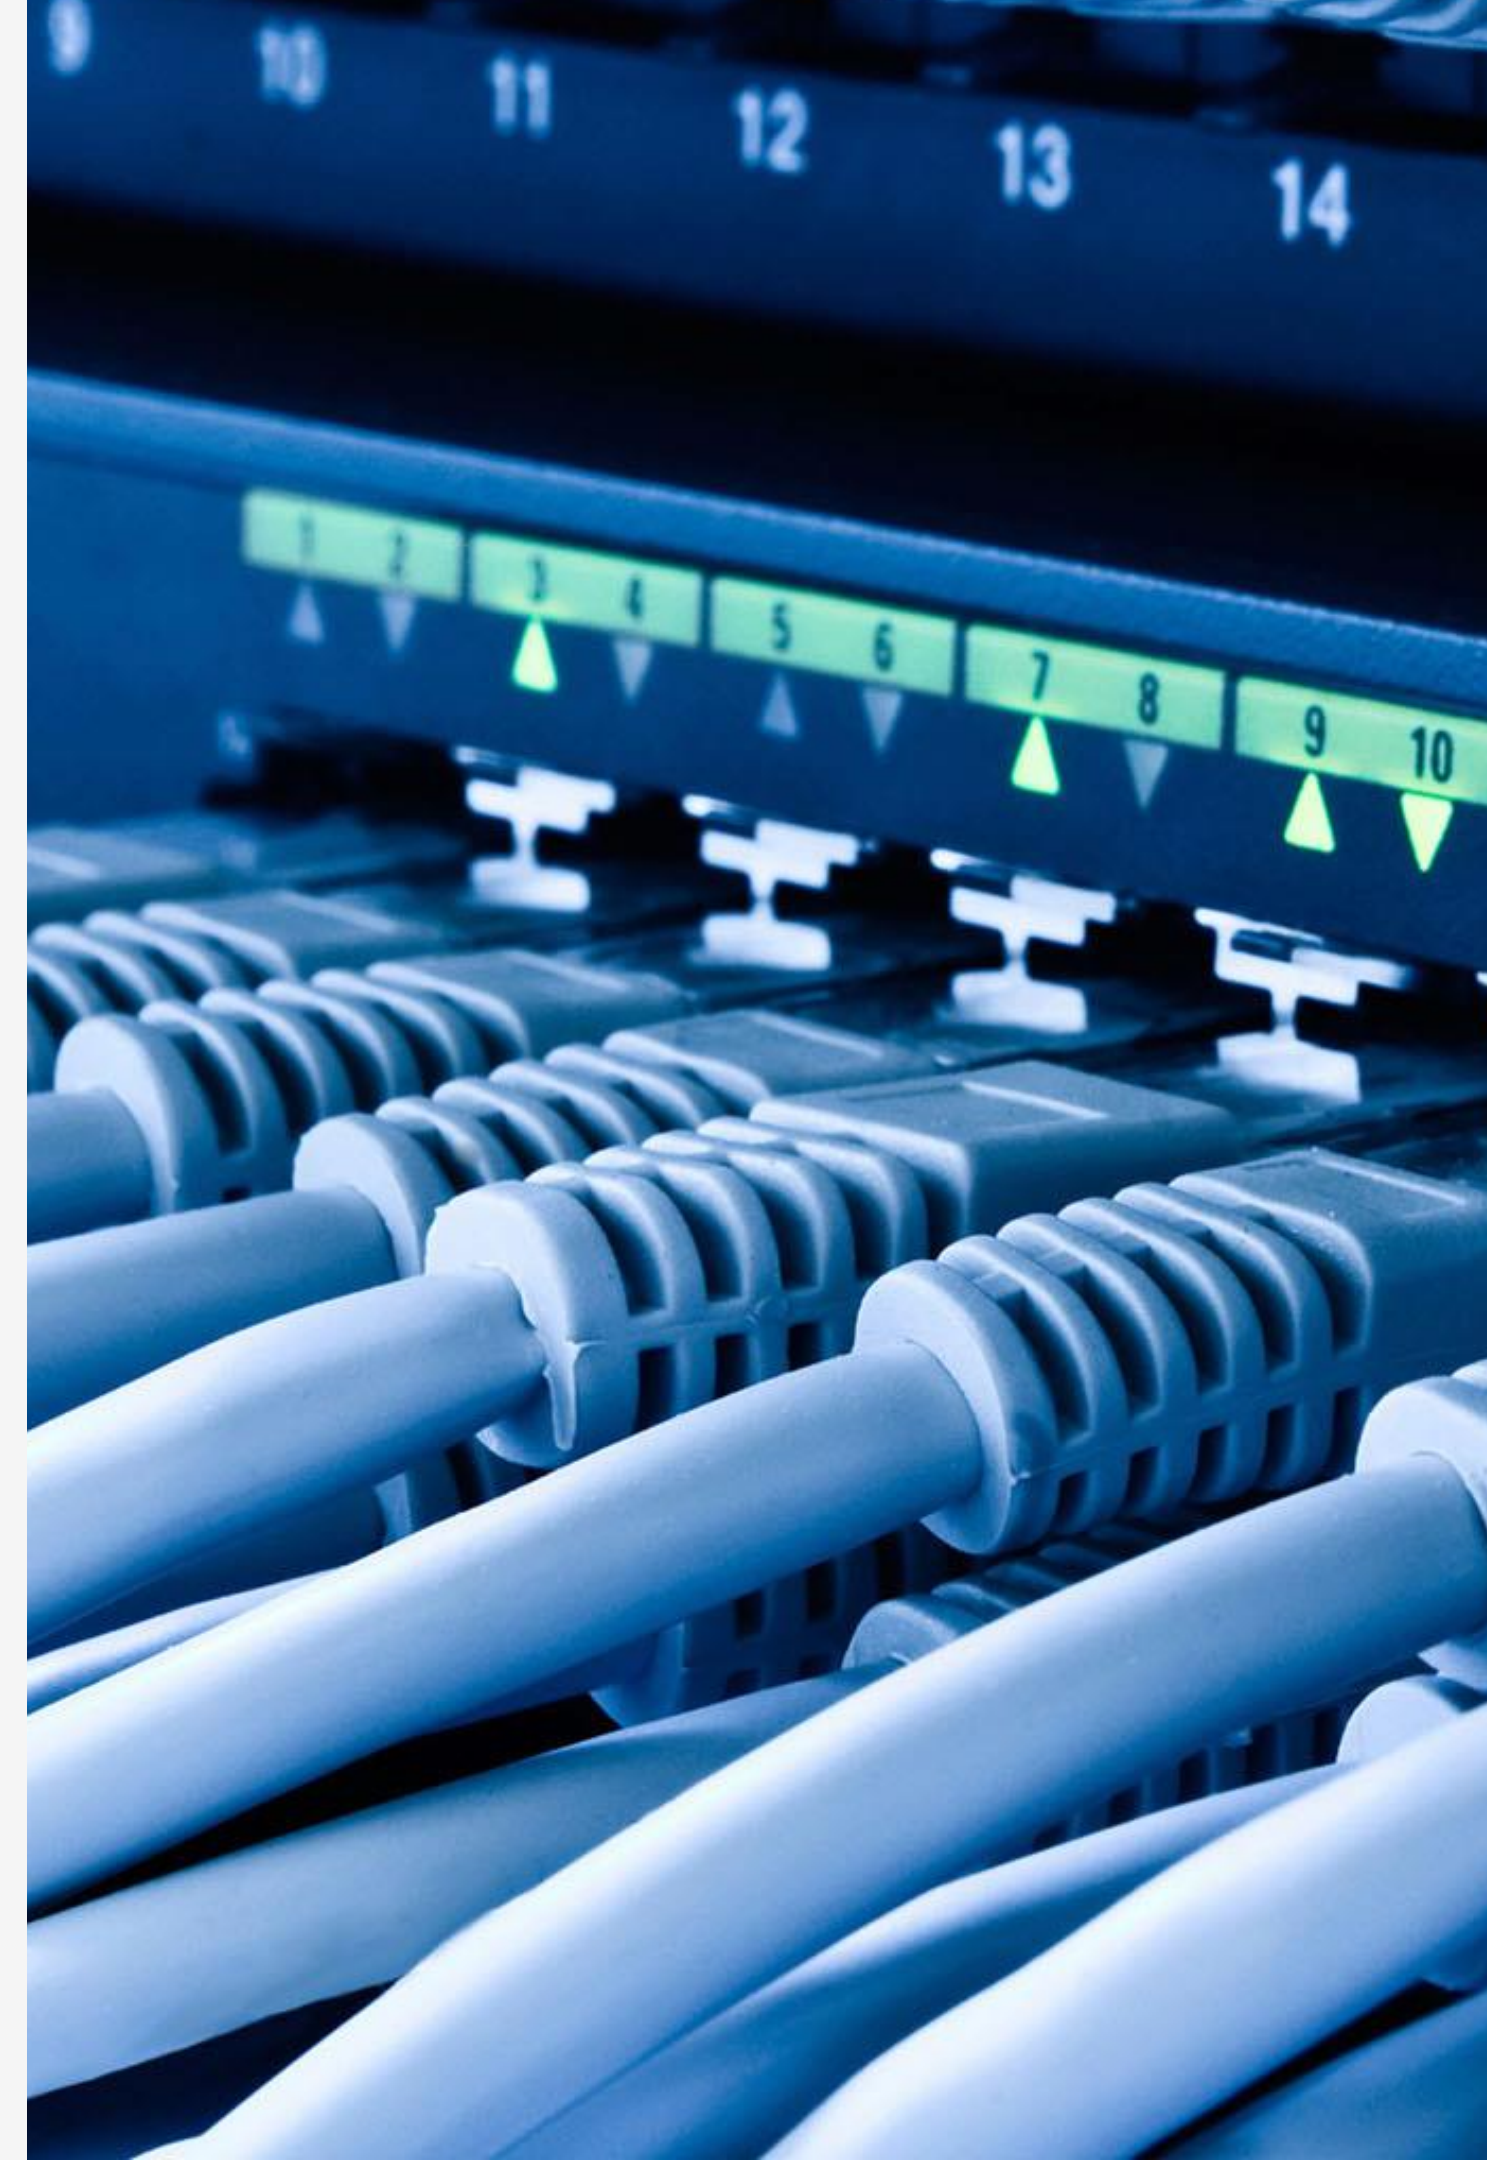

Network design and implementation: Our team will work with you to design a network infrastructure that meets your current and future needs, taking into account factors such as scalability, reliability, and security. We will then implement the design, making sure that your new network is up and running smoothly.

Network security and threat management: We understand that network security is a critical concern for businesses of all sizes. Our team of experts will help you secure your network against cyber threats, including viruses, malware, and unauthorized access. We will also monitor your network for signs of intrusion and take action to protect your data and systems if needed.

Virtual private network (VPN) setup and management: We can help you set up a VPN that allows you to securely connect your employees and partners to your network from anywhere in the world. We will also manage the VPN, making sure that it is running smoothly and troubleshooting any issues that may arise.

Cloud networking solutions: Our team can help you take advantage of the many benefits of cloud computing by designing, implementing, and managing cloud networking solutions that integrate with your existing infrastructure.

Wireless network design and implementation: We can help you design, install and configure wireless network that meet your current and future needs, taking into account factors such as scalability, reliability, and security.

IT Infrastructure Solutions & Services

Strategic Alignment: We assess your current infrastructure and create a strategic plan to align technology with your organization's unique goals and objectives.

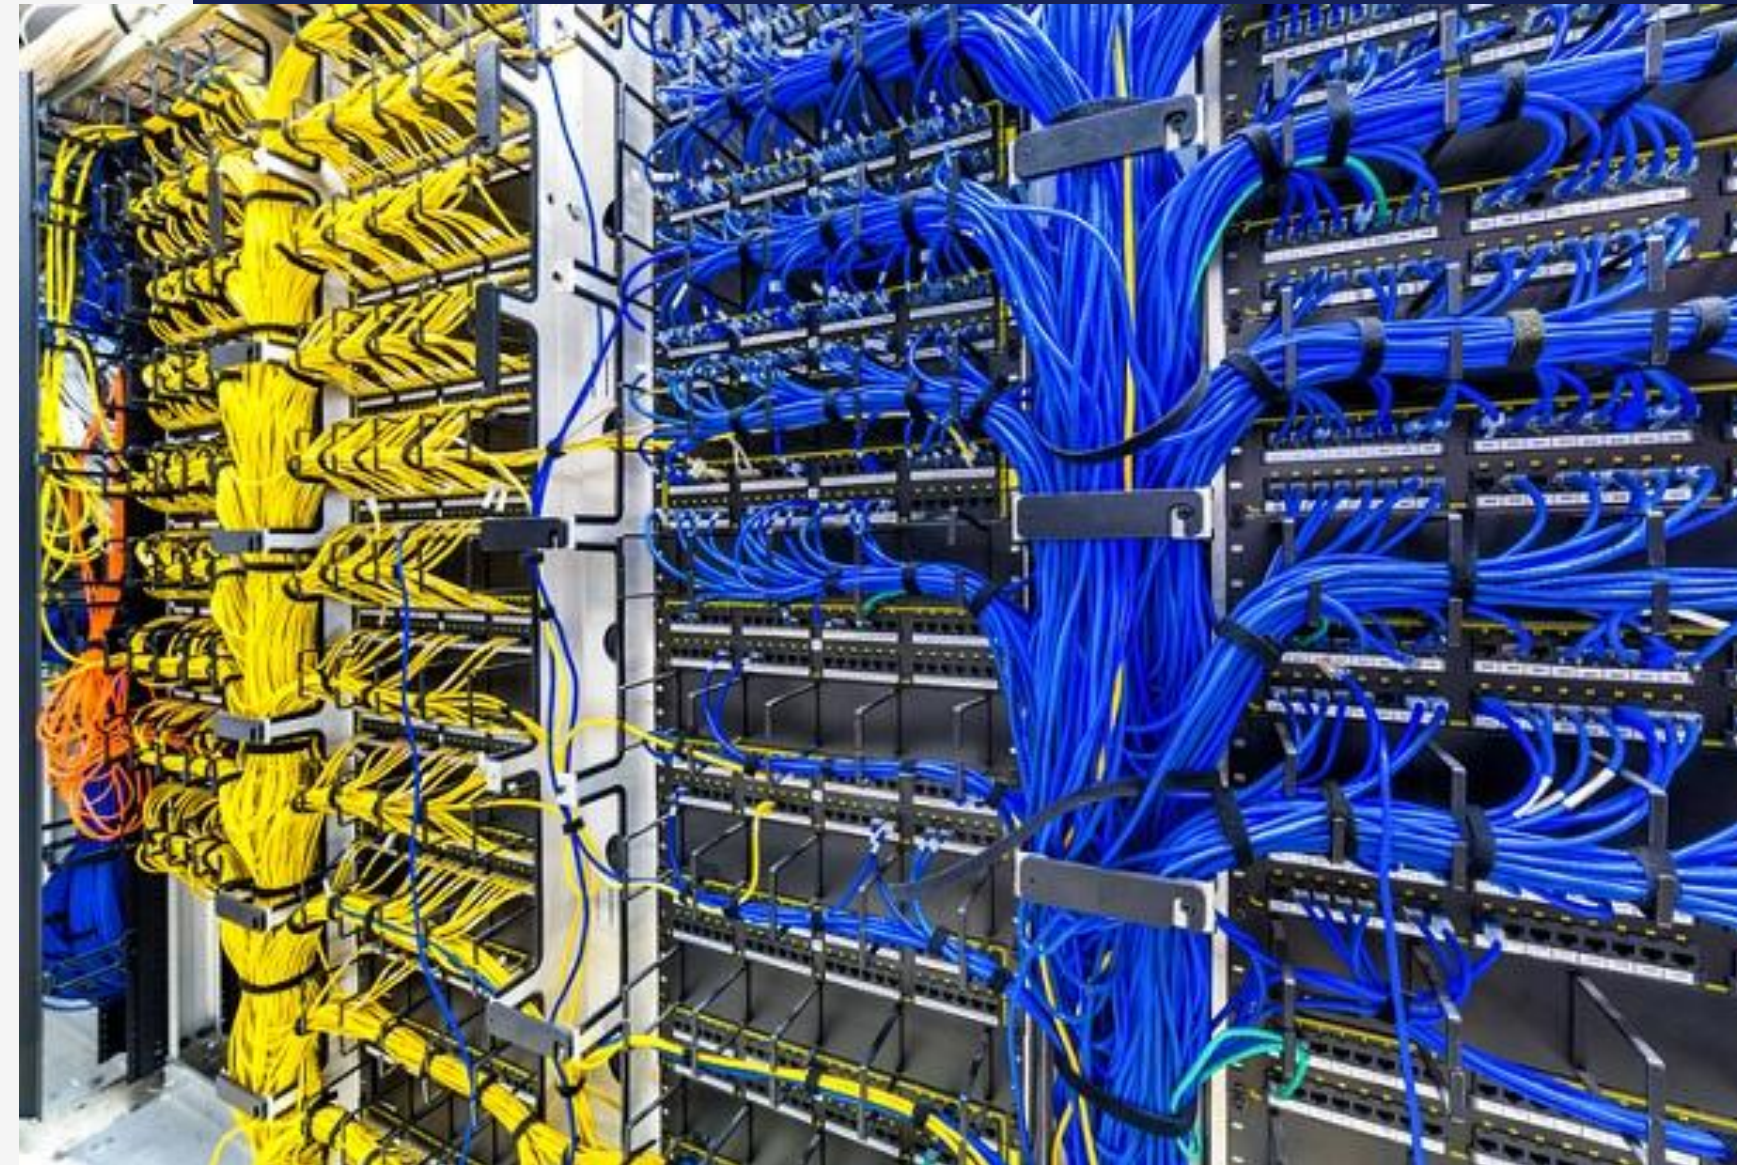

Holistic Procurement: Our expertise ensures the selection and procurement of hardware and software components that seamlessly integrate for optimal performance.

Seamless Integration: We specialize in integrating diverse IT elements, ensuring they work together smoothly to enhance operational efficiency.

Fortified Security: Our solutions prioritize robust security measures and regulatory compliance, safeguarding your digital assets and reputation.

Proactive Management: We provide continuous monitoring and maintenance to preemptively identify and resolve issues, reducing downtime risks.

Scalable Solutions: Our services are designed for scalability and future-proofing, allowing your infrastructure to evolve with your organization's needs and technology advancements.

Cyber-Security Solutions & Services

- Comprehensive cyber-security solutions tailored to your specific needs and requirements, including risk assessments, vulnerability testing, and threat analysis.
- Implementation of multi-layered security measures to protect your network and data from cyber threats and attacks.
- Advanced security solutions including firewalls, intrusion detection and prevention systems, and endpoint protection to safeguard your network and data from external and internal threats.
- Ongoing monitoring and management of your network and data to detect and respond to security incidents in real-time.
- Compliance and regulatory assessments to ensure your organization meets industry-specific security standards and regulations.
- Employee awareness and training to educate staff on best practices for maintaining cyber-security, and to help prevent human error from leading to security breaches.
- Disaster recovery and business continuity planning to ensure your organization can continue operating in the event of a security incident or other disaster.
- Collaboration with industry-leading vendors and technology providers to ensure your organization has access to the latest cyber-security technologies and best practices.
- Customized cyber-security solutions based on the size, scope, and complexity of your organization, and tailored to your unique needs and budget.

PUBLIC WI-FI SOLUTIONS & SERVICES

- Comprehensive design and deployment of high-performance Wi-Fi networks.
- Managed guest Wi-Fi solutions for hotels, café, restaurants, public spaces, public events, internet café, and private properties.
- Implementation of secure authentication and access control measures to protect your network and data using our in-house developed access control system and app.
- Ongoing network monitoring and management to ensure optimal performance and uptime.
- Integration with other IT systems and applications to enable seamless connectivity.
- Customized network configurations and user access policies to meet your specific needs and requirements.
- Remote management and support, including troubleshooting and issue resolution, to minimize network downtime and disruption.
- With a decade of experience we design and implement robust public Wi-Fi systems for labor camps, ensuring seamless connectivity and network management.
- Our expertise in systems integration delivers tailored network solutions for company accommodations, optimizing connectivity and user experience for employees.
- We can even manage public Wi-Fi or accommodation Wi-Fi for you or your company for a fixed monthly cost.
- Specially made network for hospitality and corporate sector.

Cloud Solutions & Engineering

Your own private cloud: In addition to building new cloud-based applications, we also offer services to help you build your own private cloud, similar to those offered by major cloud providers like AWS, Azure, and Google Cloud. This can include everything from infrastructure and network design to security and compliance. This option gives you more control and flexibility over your data and applications.

Cloud architecture design and implementation: Our team will work with you to design a cloud architecture that meets your current and future needs, taking into account factors such as scalability, reliability, and security. We will then implement the design, making sure that your new cloud-based systems are up and running smoothly.

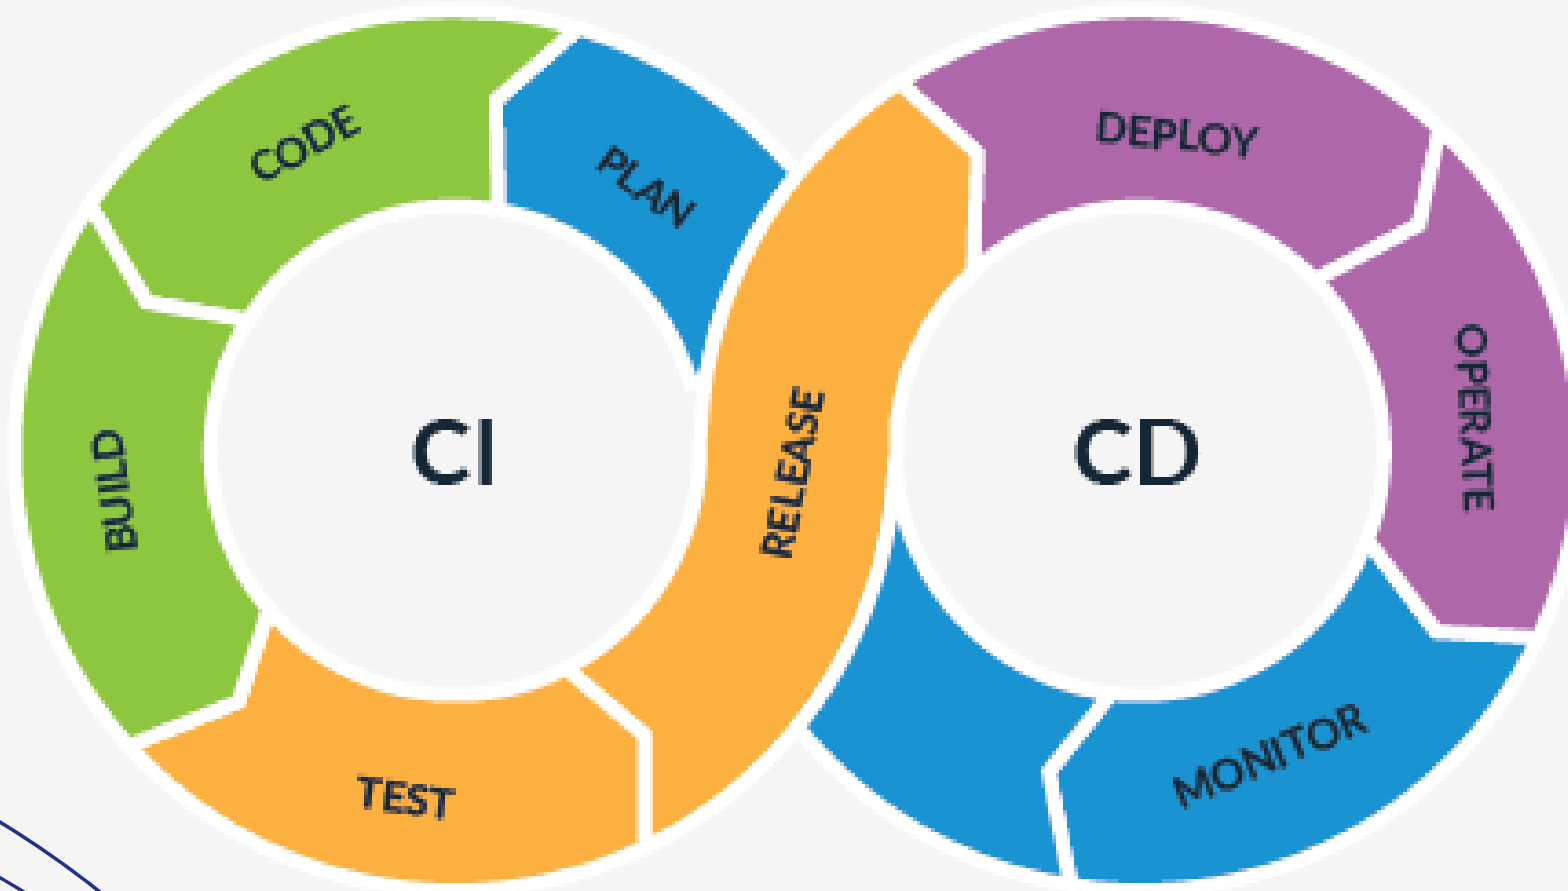

Cloud migration services: We can help you migrate your existing systems and data to the cloud, minimizing disruption to your business and ensuring a smooth transition. We will help you plan, execute, and test the migration, and provide ongoing support to ensure that your systems are running optimally in the cloud.

Cloud cost optimization: Our team can help you optimize your cloud infrastructure costs by identifying and eliminating waste, implementing cost-saving strategies, and monitoring your usage and costs over time.

Cloud security and compliance: We understand that security and compliance are critical concerns when it comes to cloud computing. Our team of experts will help you secure your cloud-based systems and ensure that you are compliant with all relevant laws and regulations.

Cloud-native application development: We can help you design, build, and deploy cloud-native applications that are optimized for the cloud, taking advantage of features such as scalability, elasticity, and self-healing.

Desktop Apps, Web Apps & Web Development

Web apps and web development are essential components of any modern business. They allow companies to reach new customers, streamline operations, and stay competitive in today's digital marketplace. At Vaseeh Networking Services LLC (VNS LLC), we offer a wide range of web app and web development services to help businesses of all sizes build and maintain robust and reliable web-based systems.

Our team of experienced web developers and designers can help you create custom web apps, responsive web designs, e-commerce websites and more that are tailored to your unique business needs. Whether you need to build a new web app from scratch, redesign an existing website, or add new features to an existing web app, we have the expertise and resources to get the job done.

Some of the web app and web development services we offer include:

- Custom web app development
- Web design and development
- E-commerce website development
- Website redesign and maintenance
- Responsive web design

ANDROID & IOS APPS

- Custom mobile app development: Our team will work with you to understand your business requirements and design, develop and implement a custom mobile app that addresses your business needs. We will use latest technologies and frameworks to deliver scalable, reliable and efficient mobile apps and make sure that it meets your expectations in terms of functionality, usability and performance.
- iOS and Android app development: We specialize in developing mobile apps for both iOS and Android platforms, using the latest technologies and frameworks available. Our team of developers are well-versed in Swift, Objective-C, Java and Kotlin, and we can help you create a high-performance, user-friendly mobile app that looks great and runs smoothly on both platforms.
- Mobile app redesign and maintenance: Whether you need to update the design of your mobile app or add new features, we can help you redesign and maintain your mobile app to keep it current and effective. Our team will work with you to improve the user experience, optimize your app for the latest iOS and Android versions, and ensure that your mobile app stays up-to-date with the latest technologies.
- Mobile app testing and deployment: We understand the importance of quality assurance and testing in the mobile app development process. Our team will test your mobile app thoroughly on different devices and platforms to ensure that it is free of bugs and runs smoothly. We will also help you with the deployment process and ensure your mobile app is available on App Store and Play Store.

SEO/SMM

Search engine optimization (SEO): Our SEO services include keyword research, on-page optimization, link building, and technical SEO. We will work with you to improve your website's visibility in search engine results pages (SERPs) by identifying the right keywords, optimizing your website's content and structure, building high-quality backlinks, and fixing any technical issues that may be affecting your search engine rankings. Additionally, we will continuously monitor your website's performance, and make necessary adjustments to ensure that your website stays ahead of the competition.

Social media marketing: Our social media marketing services include creating and managing social media accounts, content creation and curation, and social media advertising. We will help you increase your brand awareness and engagement by creating a content strategy, managing your social media accounts, and creating ad campaigns that target your desired audience. Additionally, we will analyze and provide reports on the performance of your social media campaigns and make adjustments to improve their effectiveness.

Content marketing: Our content marketing services include creating and curating high-quality, relevant, and engaging content that will help you establish thought leadership and attract new customers. We will work with you to create a content strategy, research and create various types of content such as blog posts, videos, infographics, and more, and promote it through various channels to reach your target audience. Our content will be optimized for both the user and search engines, and will be continuously monitored and improved to ensure its effectiveness.

Paid advertising: Our paid advertising services include creating and managing campaigns on various platforms such as Google AdWords, Facebook Ads, Instagram Ads, etc. We will work with you to create effective ad campaigns that will target your desired audience, and track and analyze their performance to optimize and improve their effectiveness. Our team will also provide you with regular reports on the performance of your paid advertising campaigns, and make adjustments to improve their ROI.

C.H.I.S

Cloud Hosted ISP-MGMT Server

The CHIS-V2 is a comprehensive, feature-rich solution designed to meet the diverse needs of Internet Service Providers (ISPs). With the ability to support an unlimited number of concurrent users when configured with the right hardware, it's an ideal choice for ISPs utilizing Mikrotik RoS and other compatible NAS systems. CHIS-V2 complies with global telecom regulations, including those of PTA in Pakistan and TRA in the UAE.

This versatile system enables ISPs to create, manage, and bill for PPPoE, VPN, and Hotspot user accounts seamlessly. It offers a user-friendly self-care portal, allowing customers to check their account status, change access packages, make payments, and more. The system also supports automated billing, VAT, and tax calculations, ensuring hassle-free financial management.

One of CHIS-V2's standout features is its ability to modify access packages and speeds on the fly without user disconnection. It also boasts automated database backups and updates, providing both security and convenience. With extensive data retention capabilities, the system keeps detailed access logs, connection records, and internet browsing history.

For convenience and efficiency, CHIS-V2 offers POS-based voucher creation and printing, with support for QR code auto-login. It simplifies voucher management with options for bulk creation, MAC address binding, and automatic disconnection of expired vouchers. Users can instantly enable or disable vouchers and access detailed reports for informed decision-making.

This robust solution provides centralized control over multiple routers, bandwidth and uptime management, and staff accounting. It offers customizable dashboards for owners, admins, and partners, along with insights into network information. Live bandwidth graphs, expense tracking, and comprehensive sales and staff logs round out its impressive feature set.

- **Customizable templates:** VNSP-CRM-V5 comes with a variety of customizable templates that you can use to create professional-looking invoices, quotes, and payment reminders.
- **Reporting and analytics:** VNSP-CRM-V5 provides detailed reporting and analytics that allow you to track your sales and customer information.
- **Customer management:** VNSP-CRM-V5 allows you to easily manage your customers and keep track of important information such as contact details and purchase history.

PUBLIC GUEST WI-FI SYSTEM

Public guest Wi-Fi has become a customer expectation across various industries, and CHIS - V2 is leading the way in transforming this service into a powerful tool for businesses. This advanced solution ensures seamless connectivity, user-friendly portals, data security, and marketing opportunities. It provides valuable usage analytics, supports billing and revenue generation, simplifies management, and scales effortlessly to meet the needs of businesses of all sizes. CHIS - V2 is revolutionizing public guest Wi-Fi, setting a new standard for exceptional customer experiences in the digital age.

Seamless Connectivity: CHIS - V2 ensures that guests experience a smooth and uninterrupted connection. It optimizes Wi-Fi networks for performance and reliability, reducing downtime and frustration.

User-Friendly Portals: With CHIS - V2, businesses can create branded, user-friendly login portals that enhance their brand's image. Customization options allow them to tailor the user experience to their specific audience.

Data Security: CHIS - V2 prioritizes data security, protecting users' personal information and ensuring safe browsing. It employs robust encryption and authentication mechanisms to safeguard sensitive data.

Marketing Opportunities: Public guest Wi-Fi powered by CHIS - V2 is not just about connectivity—it's a powerful marketing tool. Businesses can collect valuable customer data through the login process, enabling targeted marketing campaigns and personalized promotions.

Usage Analytics: CHIS - V2 provides businesses with valuable insights into guest behavior and usage patterns. This data can inform strategic decisions, helping organizations tailor their services to meet customer demands better.

Billing and Revenue Generation: For businesses that wish to monetize their public guest Wi-Fi, CHIS - V2 offers billing and payment integration, enabling fee-based access plans.

Support and Management: CHIS - V2 simplifies network management, allowing businesses to monitor and control their public guest Wi-Fi infrastructure with ease. Automatic updates and support ensure a hassle-free experience.

Scalability: Whether you're a small cafe or a large international airport, CHIS - V2 scales to meet your needs. It accommodates unlimited concurrent users, making it suitable for businesses of all sizes.

CLOUD MAC

Cloud based randomized MAC Check

- At VNS LLC, we are constantly innovating to bring you the latest and most advanced IT solutions. We are excited to announce the launch of our new feature - VNS cloud powered MAC check for randomized MAC addresses for your connected devices that are connected to your guest WiFi network.
- This feature is designed to enhance the security of your WiFi guest network by ensuring that only legitimate devices with device MAC address can connect to it. It works by checking the MAC address of the device that is trying to connect to your WiFi guest network.
- If the MAC address of the device is randomized, the system will show an error message and prevent the device from connecting to your WiFi guest network. This is because randomized MAC addresses are often used by malicious users who want to disguise their identity and bypass security measures.
- On the other hand, if the MAC address of the device is not randomized, the system will show the login page and allow the device to connect to your WiFi guest network. This helps ensure that only authorized guests are able to access your WiFi network.
- The VNS Cloud Powered Random MAC Check feature is easy to set up and use. Simply contact our team to get started and we'll take care of the rest.
- At VNS LLC, we are committed to providing our clients with the best IT solutions and services. With our VNS Cloud Powered Random MAC Check, you can be sure that your WiFi guest network is secure and protected.
